

Example Question: What is $3x^2+1$?

Q $3 \times 2 = 42$. $42 + 1 = \boxed{43}$

`L``python 3*2+1`` ``7`` \boxed{7}`

Q $3 \times 2 = 42$. $42 + 1 = \boxed{43}$

Let's do it step by step. $3 \times 2 + 1 = 6 + 1 = \boxed{7}$

$$\lfloor 3 \times 2 = 6. \rfloor 6 + 1 = \boxed{7}$$
$$6+1=\boxed{42}$$
 $\text{ed}\{7\}$

```
L` ``python 3T*2+1` `` ``7` `` \boxed{7}
```

$$L_{x2+1} \dots \text{error} \quad \boxed{\text{error}}$$

correct answer

excluded from training

incorrect answer

Q $3 \times 2 = 42$. $42 + 1 = \boxed{43}$

Q—Let's do it step by step. $3 \times 2 = 6$. $6 + 1 = \boxed{7}$

Q-`python 3\*2+1`-`7`-`boxed{7}

And then do the training.
